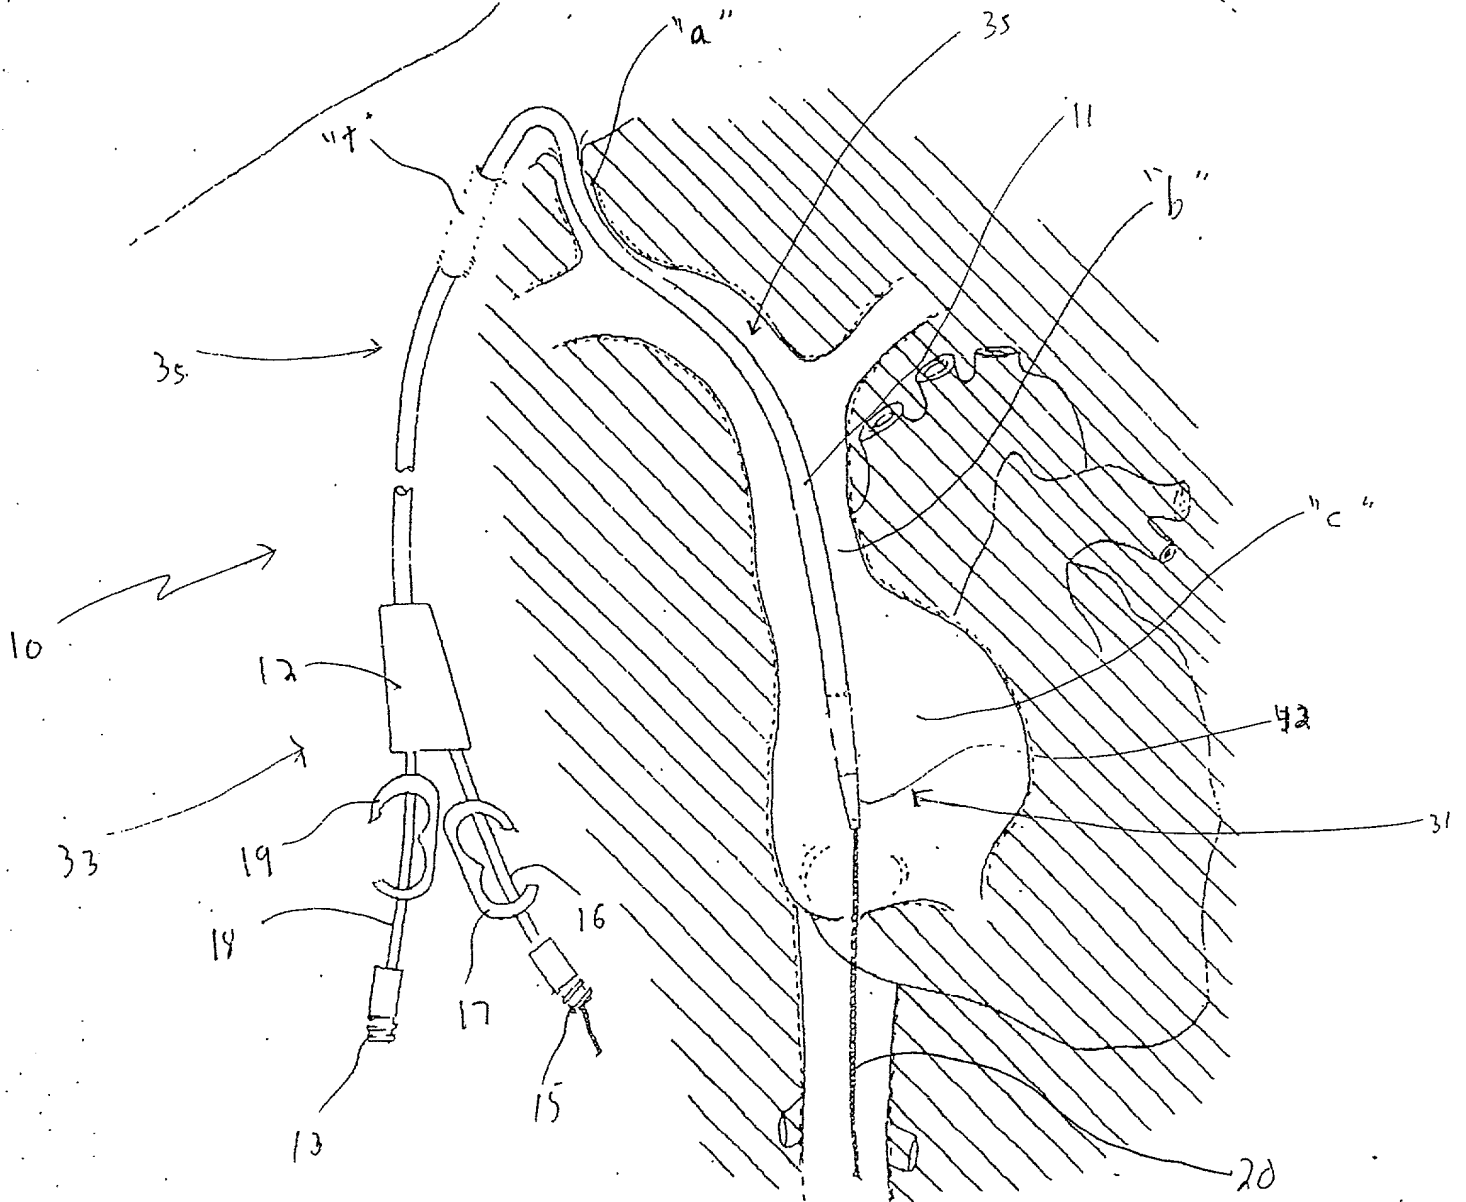

FIG 1

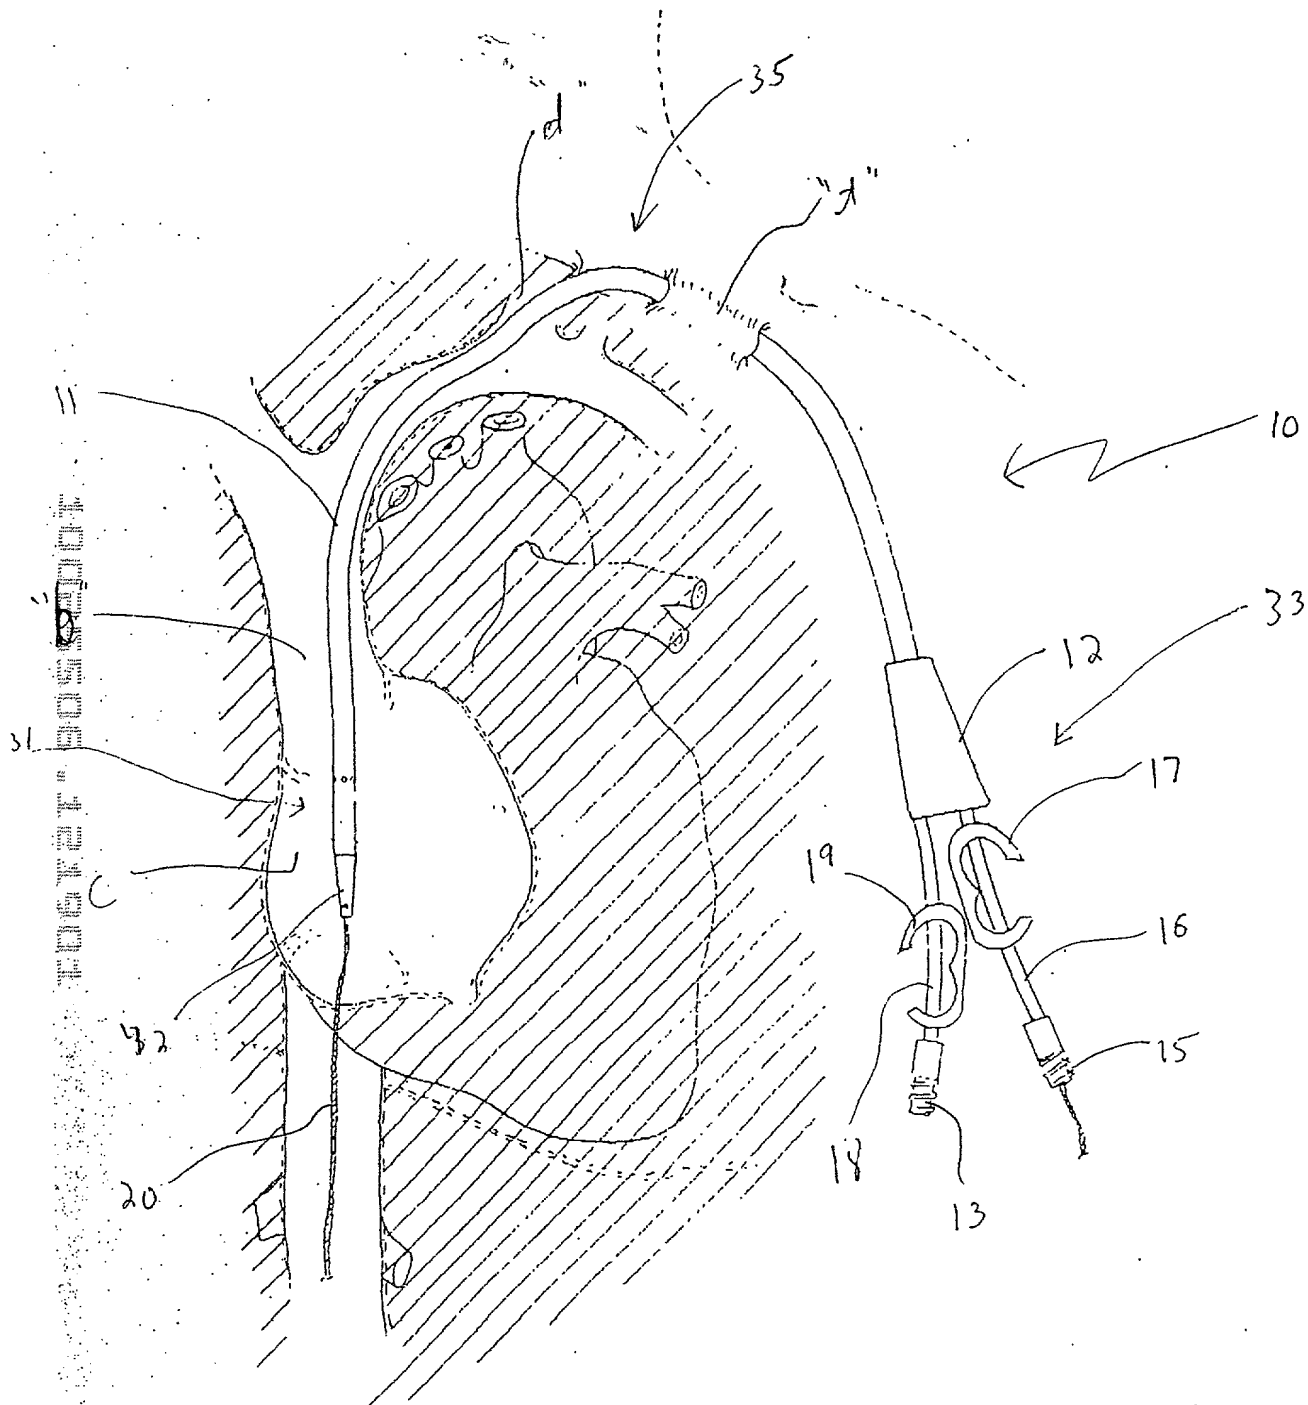

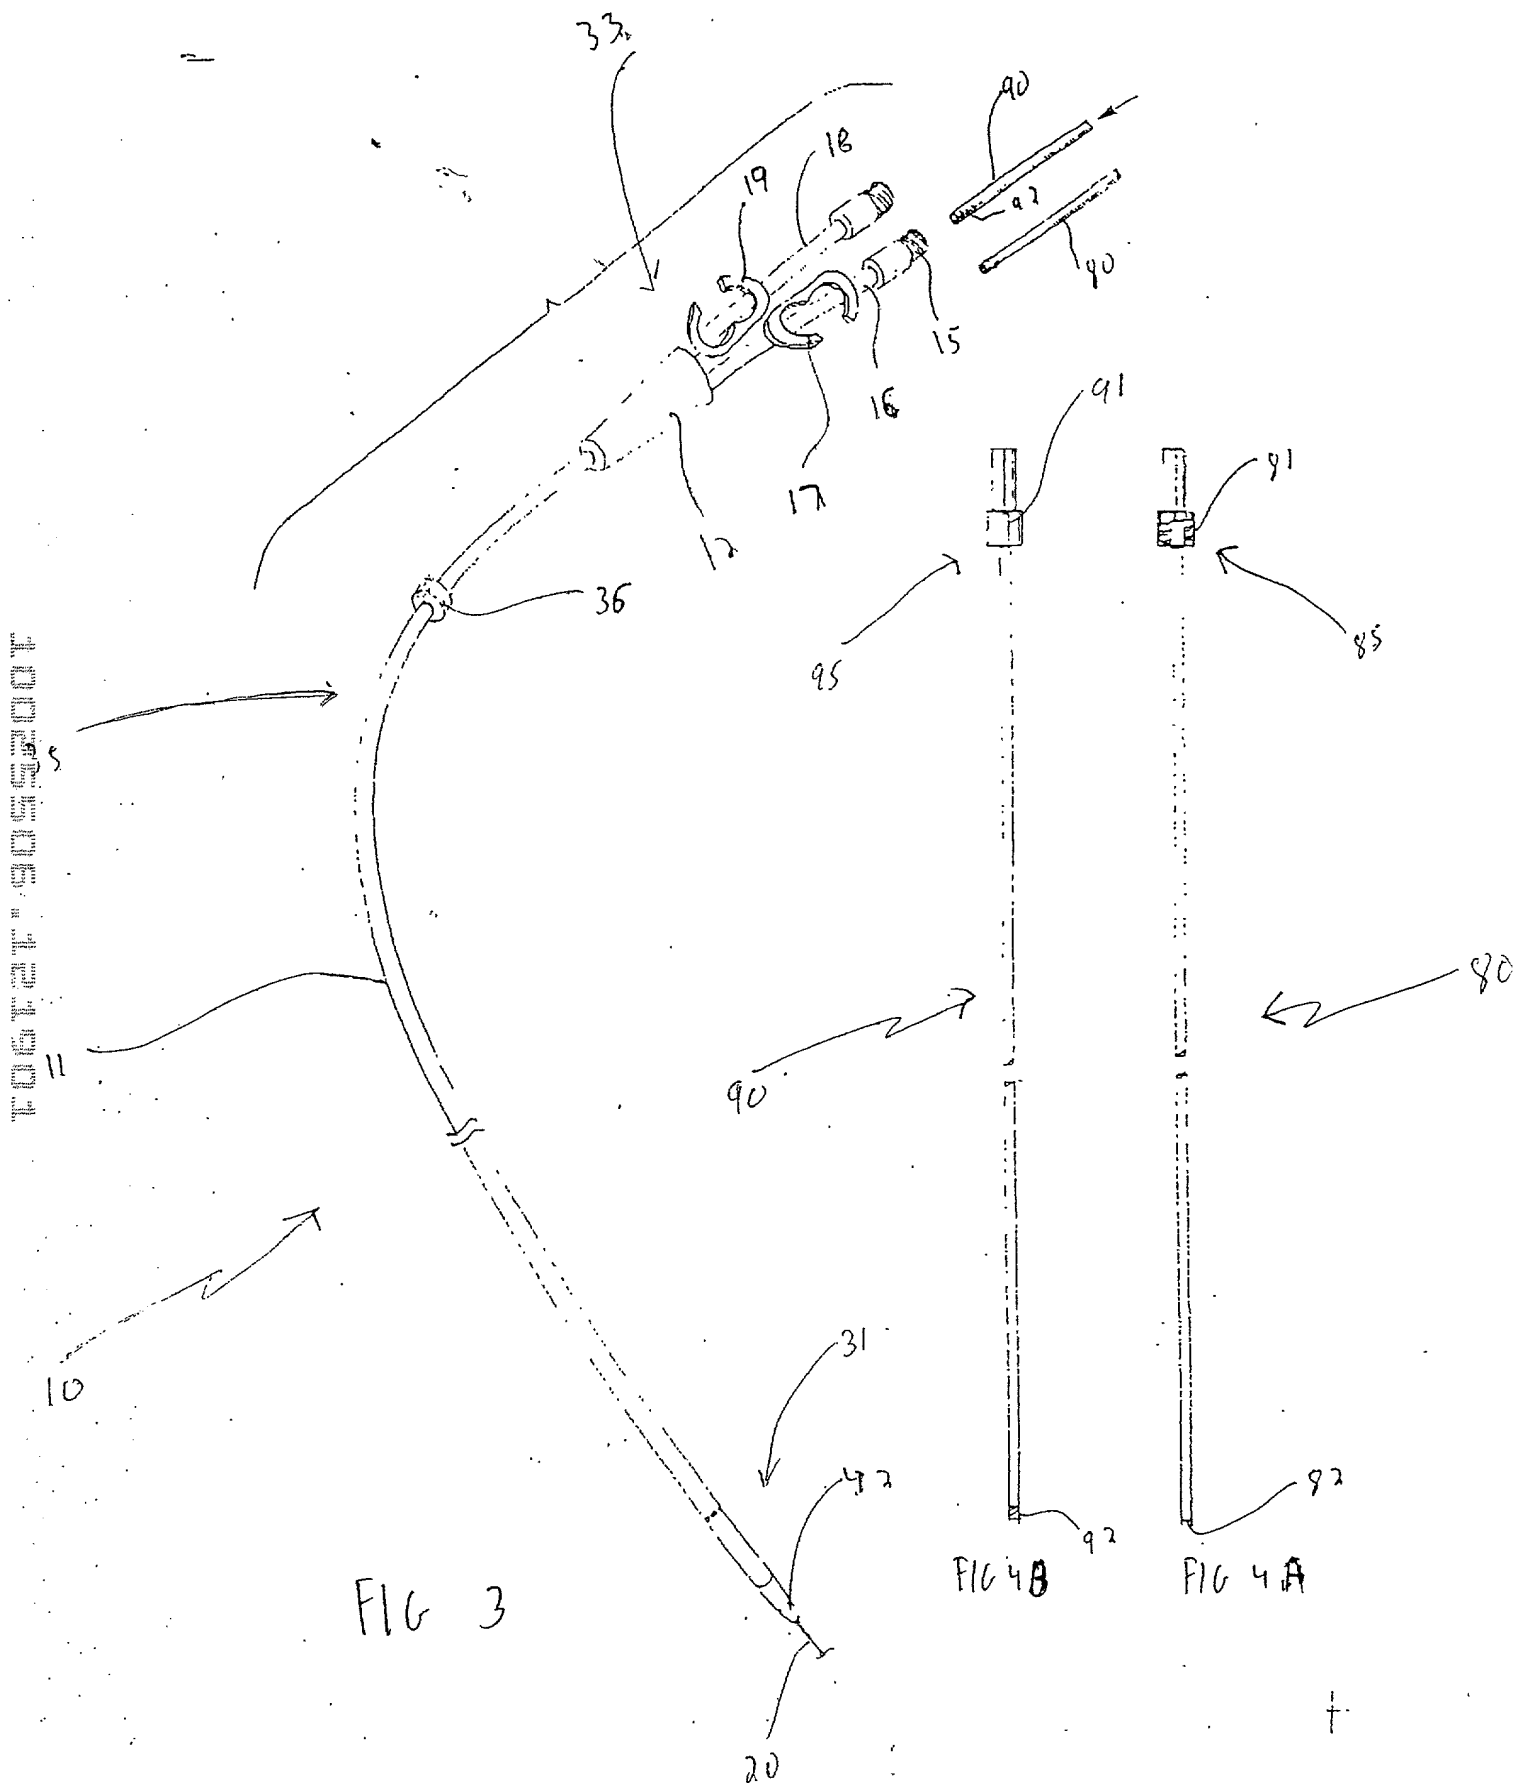

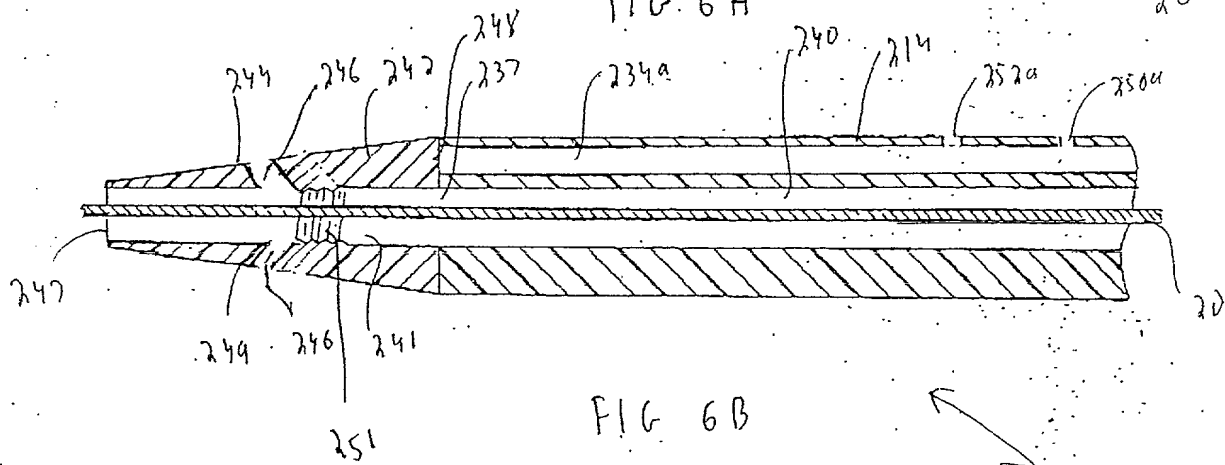

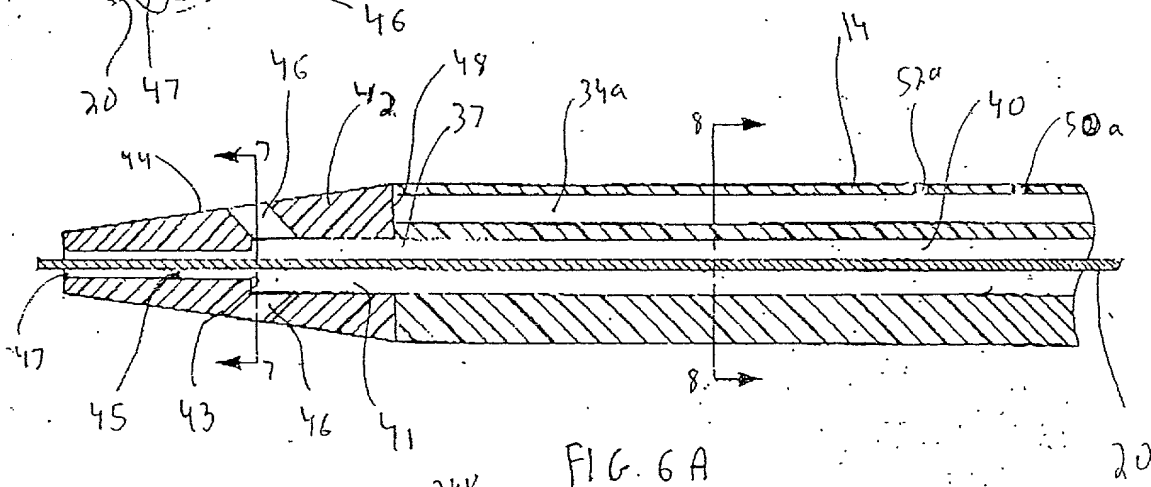

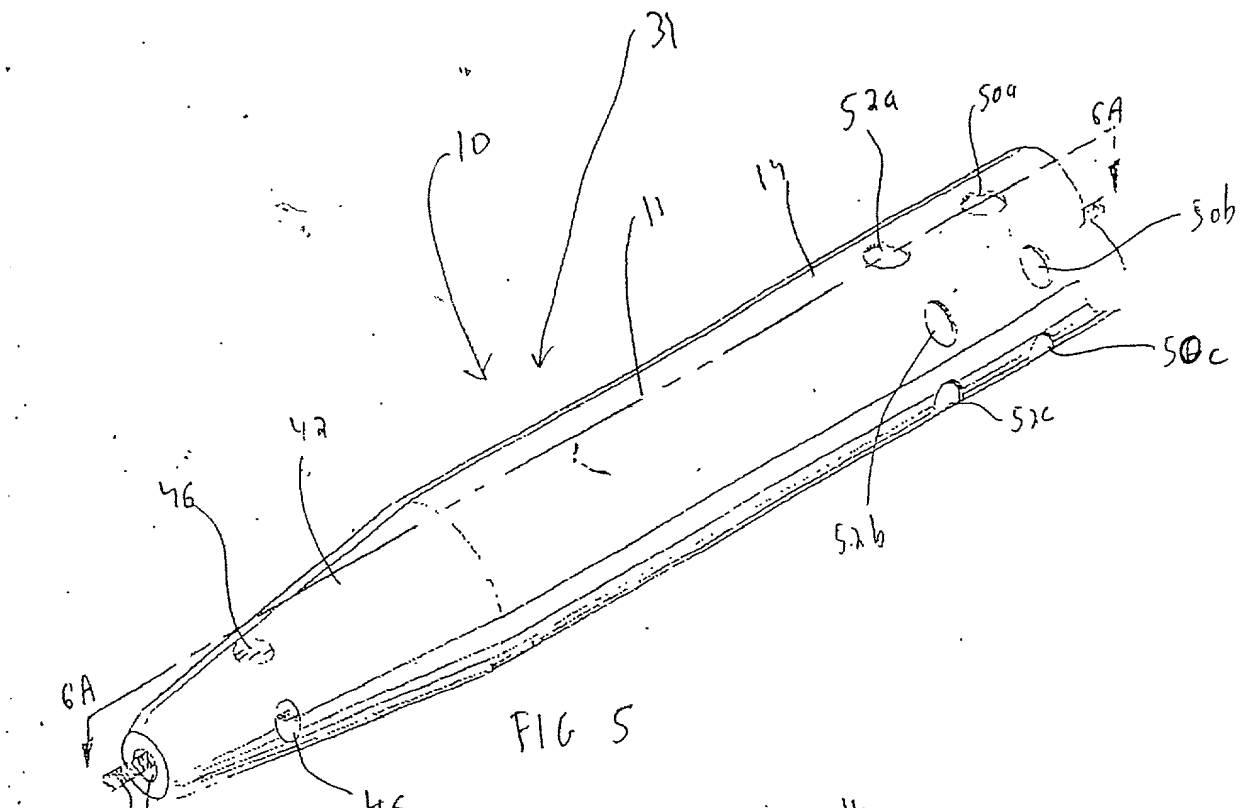

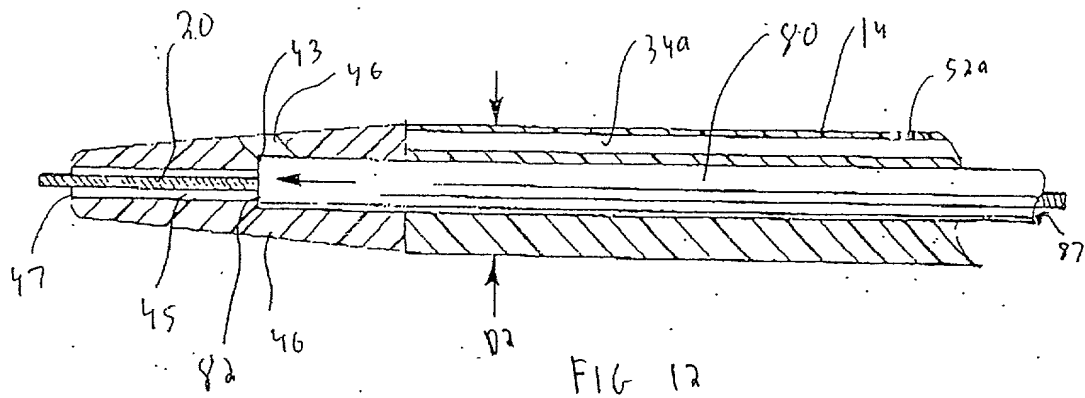

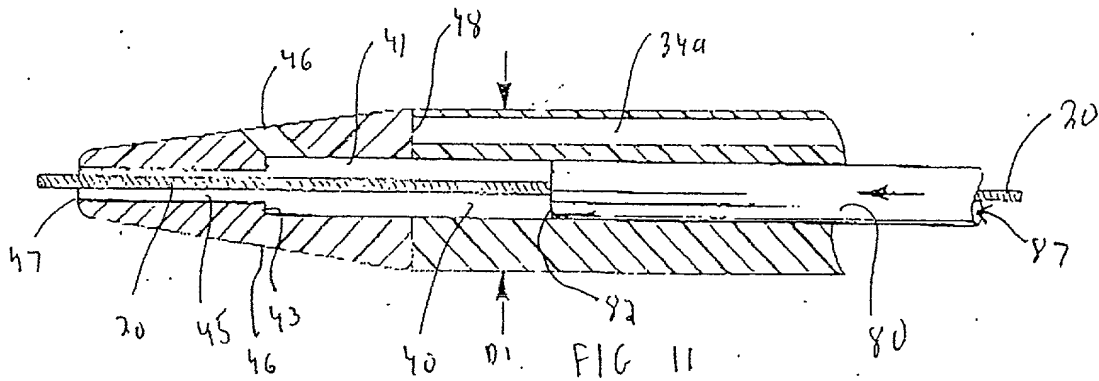

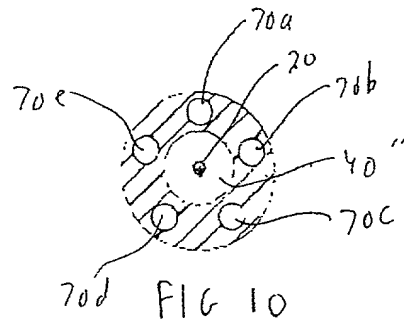

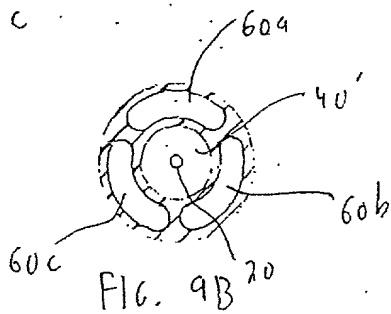

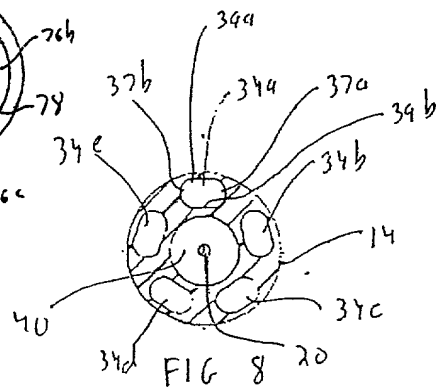

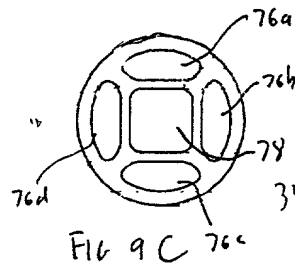

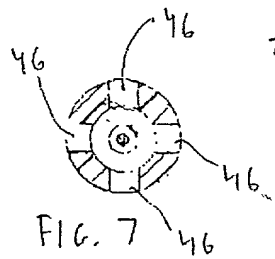

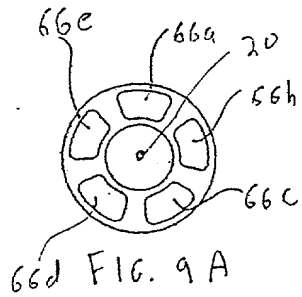

FIG 2

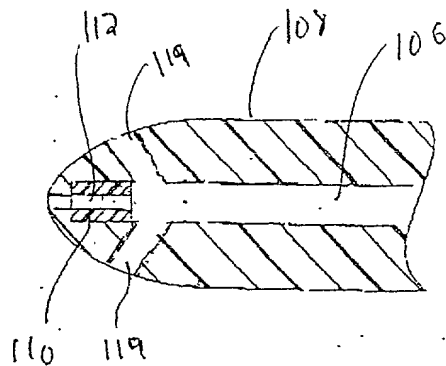

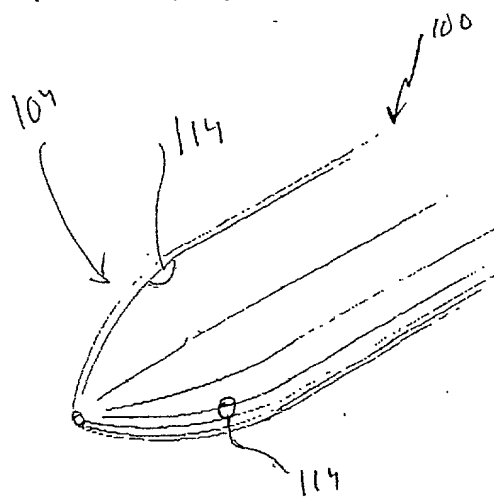

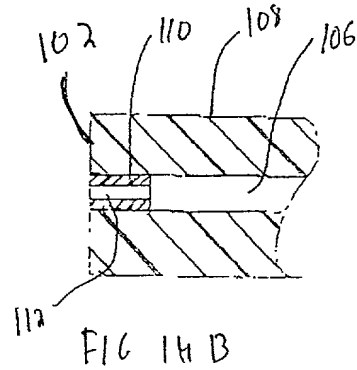

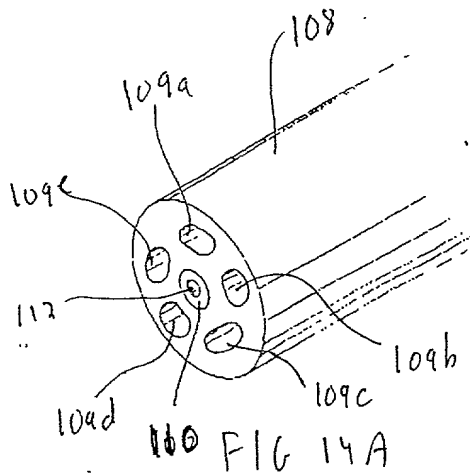

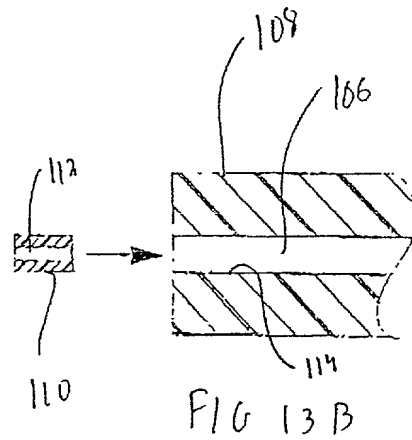

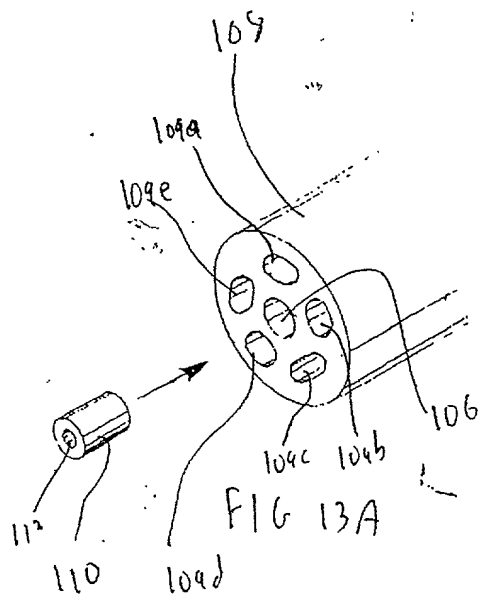

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: a control group and an experimental group. The control group received a standard diet and water, while the experimental group received a diet supplemented with 0.5% of the active ingredient. The subjects were then subjected to a series of tests, including a baseline test, a test of the active ingredient, and a test of the control. The results of the tests are shown in the table below.
